[Tutorial] A way to Practice Competitive Programming : From Rating 1000 to 2400+

 By [E869120](#), 9 months ago, 

Dear Codeforces community.
 Finally red :)

Today, I want to share about some ways to practice competitive and gain your rating. I hope that this is helpful for those who is practicing competitive programming harder but rating is sluggish. There are 54,000+ people who participated in Codeforces contests actively, but sadly only a few people reach a red-ranked coders. For people who can't reach red, I will introduce my way to gain rating in some steps.

This blog is an extended and more detailed version of [my previous tutorial blog](#), but 2 years and now are different. So there are many points that are different from blog which has written 2 years ago. Note: Some people who already read my previous tutorial blog may doubt, but do not doubt — I should say that the "from rating 1000 to 2000" part of this blog is not the copy of my previous blog and it's very different.

Since the size is very big, if I wrote contents to Codeforces blog directly, it might be too long. So, this time, I will share a 19-page PDF link of my tutorial blog. This time, my blog includes introduction, knowledge of some contests systems (AtCoder, TopCoder) and some convenient websites, some ways to practice for improve rating, and conclusion. Also, optimal practice method is differ by rating. So, this time, I will write in 4 steps: **1000 -> 1400**, **1400 -> 1900**, **1900 -> 2200**, and **2200 -> 2400**.

The link of my blog (PDF) is as follows:

[Tutorial] A way to practice competitive programming — from rating 1000 to 2400+

Please comment if you have suggestions, comments to my blog, and opinions on my way to practice.

Thank you for reading!

💬 #tutorial, way, practice, 2400, #rating, thankyou!

If you reach yellow+ in CF and/or topcoder. Plus you solve enough past OI problems from the well-known checklist by **ko_osaga**, I guess you're pretty much set to win atleast a bronze.

▲ +19 ▼

E869120 has already won a gold medal at the IOI, link.

RockyB

For my country whole history only 2 students won a gold medal and it was 12 years ago. This fact confuses me, I don't think that we don't have talented hard-working students.

Thus, I'm very curious about how to win a gold medal and it's a reason why I ask **E869120** for help.

→ Reply

9 months ago, # ^ | ← Rev. 2

▲ +29 ▼

Okay, now I know that there are a lot of people who wants to know how to get gold medal in IOI.

E869120

Since writing so many blogs in short period is not so good for me, I'll write a blog about "[Tutorial] How to win a gold medal in IOI" (title is tentative) 2-3 weeks later.

Thank you for your proposal. :)

How do you see performance rating in cf?

→ [Reply](#)

[▲](#) +39 [▼](#)

9 months ago, # [^](#) |

← Rev. 2 [▲](#) +34 [▼](#)

First, I should apologize that I did not show how to calculate performance in Codeforces in my blog. Thank you for your comment.

Actually, in Codeforces, your **approximate** performance in contests/virtual is calculated as follows:

- p : Your rank in Codeforces contest
- a : Initial rating of participant who got rank p
- b : Rating change of participant who got rank p
- $perf = a + 4 * b$ (approximately)

E869120

For example, if you got 20th place in contest and rating changed from 2513 to 2604, your performance is approximately $2513 + 4 * 91 = 2877$.

Another example is virtual contests. If you got 4200 points and it was between 13-th place and 14-th place in **actual contest**, your performance is approximately the average of performance of 13-th player and performance of 14-th player.

But there could be error of ~50 rating performance. So if you want to calculate more precisely, you can pick the rating change of several people who got very near rank and rating does not change so much.

Sorry for not showing performance calculation formula in my blog.

→ [Reply](#)

naveen.dugar1010

Thanks, you are really a good contributor.

→ [Reply](#)

[▲](#) 0 [▼](#)

Juve45

8 months ago, # ^ |

▲ +10 ▼

I think you can also calculating it by finding the value of the rating for which the rating change of the virtual contest is 0, using this [tool](#).

I assume that if the rating change is 0 in some contest, then the performance is approximately equal the your rating.

→ [Reply](#)

8 months ago, # ^ |

← Rev. 3

▲ 0 ▼

Wooooooooow very good idea to calculate rating!
From next time, I will use this idea. Thank you!

E869120

Results	
Expected Rank	88
Rank	31
Rating Change	+60

→ [Reply](#)

You are awesome, thank you very much **E869120**, my goal is to be candidate master before finish this year, Just for curiosity, How many hours do you train per week?

→ [Reply](#)

E869120

9 months ago, # ^ |

▲ +12 ▼

Because I have some classes in high school, on weekdays, I trains ~3 hours per day. On weekends, I trains ~8 hours per day. So, on average, I trains approximately 25-30 hours per week.

But just before IOI was different. In Japan, there is summer vacation from late July to late August. So, usually, just before IOI is during summer vacation in Japan. So I was able to train 12-14 hours per day from 1-2 weeks before IOI.

Dear E869120 thanks to you for posting all your insights. I would like to know your opinion about Hackerrank problems. Do you ever use hackerrank for practice or do you think the other judges mentioned in your tutorial have more rich problems?

→ [Reply](#)

E869120

9 months ago, # ^ |

▲ 0 ▼

Yes!

2 years ago, I was solving hackerrank problems, and participating in hackerrank contests including "Week of Code" or "Hourrank". In my opinion, since many of hackerrank contests there are many partial scoring, if you want to practice for OI-like contests (IOI, APIO, POI, national selection camp for IOI) it is good idea to practice hackerrank.

Since there are many typical problems in hackerrank, I think that if you think you are lacking of using typical algorithm efficiently, solving hackerrank is also a good idea. But if you want to improve skills to solve problems faster, or skills to thinking about solution, you should upsolve problems in AtCoder.

▲ 0 ▼

Hey, I wanted to know how can some people on codeforces are able to solve questions like just in a minute. They have a submission for A-type problem on 00:01 and for B-type problem on 00:03. How's that possible? if I only consider the reading time for question and then even copy paste the code it goes beyond a minute. Please suggest some tips to increase our speed like that.

→ [Reply](#).

LanceTheDragonTrainer

9 months ago, # ^ |

▲ 0 ▼

Actually it is not that hard ... 00:01 in CF actually means that the submission was made before the second minute of the contest. So 40 seconds to read problem statement and 1 minute 19 seconds to write code and submit. Shouldn't be too hard for problem As in div 2.

Also, you can watch the screencast of several GMs on youtube to see how they do it.

→ [Reply](#).

naveen.dugar1010

9 months ago, # ^ |

▲ +1 ▼

Hey thanks, I was not aware that it's a 1 min and 59 secs game. And can u share some links of the screencast?

This is incredible !

I have been following your posts ever since you were a Candidate Master and this is a fantastic achievement ! Many Congratulations. I am quite proud of you.

Your tutorial is also quite helpful. Solving problems on AtCoder does do wonders.

Thank you very much for sharing the website kankooo. On AtCoder we cannot

Thank you very much for sharing the website kenkoooo. On AtCoder, we cannot see which problems we have solved in one screen and need to go to the Submissions page of each individual contest. This website is certainly very helpful. (Although now that AtCoder Beginner Contest has started including 6 problems, the interface of kenkoooo will also have to change. Not sure if they will be able to accomodate that.)

Wish you all the best !

May God bless you

Thanks for a great tutorial!

I disagree with some points but it's ofc. hard to say which method is the best. What I would recommend:

1. Don't go to the editorial after some fixed time like 20 minutes of solving a problem. Give up only if you are stuck for 10-30 minutes (10 in case of easy problems, more for harder ones). As long as you have some ideas, do investigate them and maybe you'll solve the problem yourself.
2. Upsolving problems is very important. This way you learn new things. After a contest or virtual participation, try to solve at least one more problem. This should be said early in the PDF, not only in parts about getting red rating.
3. I don't think you should copy segment trees from your code library (reference document). It's better to struggle for some time and implement them every time. You will get faster and will understand them better. Plus this is a must for those who prepare for IOI. My friends and I implement seg-trees from scratch every time. I don't remember if I ever used to copy them.
4. It's unnecessary to do "50+ virtual participations in CF". Just solve problems

4. It's unnecessary to do 50+ virtual participations in CF. Just solve problems slightly above your level. Do some virtual participations if you want to.
5. Consider changing "Make a routine that you will do just before the contest. It directly leads to the concentration during the contest." to "don't care about the contest, just have fun solving problems". I'm quite sure people perform better when they are relaxed (but not distracted).
6. "Although I experienced competitive programming for 3 years, I think that I don't know many techniques" — I think that's because you're doing too much virtual participation. You spend a lot of time on easy problems this way.

▲ +10 ▼

Thanks a lot for the tutorial, very helpful!

dunpeal

I'm trying to solidify my rating above 1400. One problem I'm seeing is that I tend to do well on Div2-only rounds, but pretty poorly on combined rounds. I reached a peak rating of 1521, then lost 214 points in just 3 combined rounds (CF Global 3+4 and Forethought Future Cup).

Is it mostly weak "mathematical concepts and thinking" like your guide claims? If so, should I focus my practice on TopCoder to strengthen those? Specifically, Div1Easy?

→ [Reply](#)

E869120

7 months ago, # ^ |

← Rev. 2 ▲ 0 ▼

To solve problem on combined round (ex. Codeforces Global Round), mathematical concepts are needed. For example, in the [third problem on Global Round 4](#), the answer only outputs 2^{H+W} — definitely one great example of mathematical problem. Another example is the [fourth problem on Global Round 4](#), just think about loop which the degree of all vertex is 2, and adding some edges. Graph theory is also the main part of mathematics, and many people who are familiar with TopCoder SRM can solve this problem easily.

I think that you are mainly stuck on problem with mathematical concepts. Solve TopCoder Div2Medium and Div1Easy. I think that

concepts. Solve TopCoder Div2Medium and Div1Easy. (I think that Div2Med is bit easy for cyans) I have three notices to solve TopCoder problems as follows:

- Some of the round is very difficult — even 4 in 5 of Div1 participants could not able to solve during the contest. Check <https://competitiveprogramming.info/> and you can check the difficulty of each problem.
- Thinking long time is important for the introduction of solving TopCoder SRM. So in your pattern, don't give up for at least 60 minutes before looking editorial.
- When you solve some problems on TopCoder SRM and you feel that your skill of mathematical concepts is improving, I recommend to solve SRM 600-719. They are bit difficult, but they are good for you.
